

Verify domain for automatic creation of accounts

Flex HRM can create new users in Visma Connect automatically if your company has verified its domain. With this solution, a verification email does not need to be sent to the employee.

Authentication Settings

Authentication Settings is a self-service portal where you as an administrator can manage and configure Single Sign-On (SSO) and verify your domain. If you are an administrator in Flex HRM, you can assign permissions to Authentication Settings under **General > Security** in Flex HRM.

Authorized for authentication settings

Users in the list are granted permission to manage the organization's authentication settings in the portal Visma Connect Authentication Settings. Grant permission by adding people below.

Authorized to configure SSO in Visma Connect

(No users)

⊕ Add row ⊖ Delete row

i Läs vår guide för uppsättning av SSO
<https://www.flexapplications.se/azure-visma-connect> 

i Portalen Visma Connect Authentication Settings

Read our guide for setting up SSO <https://www.flexapplications.se/en/azure-visma-connect>

The Visma Connect Authentication Settings portal

<https://authenticationsettings.connect.visma.com>

So, for example, if you want to give IT staff permissions, you click on “Add row” as shown in the image above and search for the user you want to give the permission to. Then press “Save” in the upper left corner.

Keep in mind that if you want to have permission to Authentication Settings yourself, you also need to grant permissions to your own account.

You can access Authentication Settings at the following link:

<https://authenticationsettings.connect.visma.com> For more detailed information about

Authentication Settings, see the documentation at the following link:

<https://docs.connect.visma.com/docs/authentication-settings>

Verify domain

For the feature to work, you need to verify your domain in Authentication Settings. You can do this by following the guide at the following link:

<https://docs.connect.visma.com/docs/domains>

When everything is done, you can see which domains are verified in HRM **General > Security**.
